PROMOTES HEALING OF DISCOLOURED AND DEFORMED NAILS CAUSED BY NAIL FUNGUS OR PSORIASIS
EMTRIX® - FOR HEALTHY NAILS

EMTRIX® - A UNIQUE COMBINATION OF 3 COMPONENTS

PROPYLENE GLYCOL
• Keratolytic agent
• Antimycotic properties

UREA
• Nail dissolving effect
• Penetration enhancing

LACTIC ACID
• Hydrating properties
• Antimicrobial activity

HIGH EFFICACY
Due to double mechanism of action
Keratolytic effect + Antimycotic effect

FAST ACTION
Rapid visible improvement
Already from 2-4 weeks of treatment

Clinically proven evidence that supports efficacy, tolerability and safety

EMTRIX® TREATMENT EFFICACY

BEFORE TREATMENT

AFTER 2 WEEKS TREATMENT

AFTER 8 WEEKS TREATMENT

AFTER 12 WEEKS TREATMENT

EMTRIX® - FOR HEALTHY NAILS

- Clinically proven treatment of discoloured and deformed nails caused by nail fungus or psoriasis
- Promotes healing and prevents the growth of nail fungus
- Rapid visible improvement already after 2-4 weeks
- Simple to use

INGREDIENTS: Propylene Glycol, Urea, Lactic Acid, Sodium Hydroxide, Water

INDICATION: Emtrix promotes healing of discoloured and deformed nails resulting from fungal infection or psoriasis. Emtrix increases hydration, gently smooths the outer layers of the nail plate and by changing the nail’s microenvironment and improving nail surface integrity prevents the growth of fungi and bacteria. Emtrix improves the appearance of nails and keeps them in good condition with first signs normally being seen after 2-4 weeks of treatment.

USE: Apply Emtrix once daily to affected nails, preferably in the evening just before bed time. Hold the point of the tube onto the nail. Press lightly on the tube and spread out the solution with the point. Cover each nail with a thin layer of the solution. It is important that the solution is also applied under the free edge of any affected nails. After application, the nail should be allowed to dry for a few minutes.

Clinical signs of improvement may be seen after 2-4 weeks of treatment. Duration of treatment varies according to the initial severity of the condition, but in many cases 3-6 months treatment may be required to achieve acceptable results. For optimal results, continue the treatment until a normal nail has grown out. Avoid using nail polish during treatment as the desired effect of Emtrix will be diminished. Emtrix acts only locally and can therefore be used during pregnancy and lactation. There is limited experience in children. Therefore, consult your doctor before treatment in children.
